

IVX WORKFLOW

Enhance Safety, Efficiency, and Compliance in Sterile Compounding

Health systems are continuously being challenged to ensure IV preparations are prepared safely and accurately while complying with increasingly complex regulations. Omnicell® IVX Workflow is a revolutionary IV workflow solution designed to address the critical and evolving challenges of sterile compounding – today and into the future.

Designed for easy placement within laminar airflow (LAF) hoods or isolators, IVX Workflow is a compact all-in-one package that incorporates integrated barcode scanning, gravimetric or volumetric verification, advanced image recognition, photo documentation, and label printing. It supports best practices in aseptic technique by providing step-by-step instructions to guide technicians in preparing IV doses according to set protocols – safely, accurately, and repeatedly.

Limited Touches for Greater Efficiency

IVX Workflow is designed to limit touches – automatically advancing the technician through the compounding process while limiting physical interaction such as touching a button, clicking a mouse, or pressing a foot pedal.

Key Benefits

- Enables alignment with best practice recommendations¹ through flexible gravimetric verification
- Drives efficiency and streamlined technician workflow with all-in-one design
- Optimises pharmacist's time with streamlined remote verification of admixtures

IVX WORKFLOW

Enhance Safety, Efficiency, and Compliance in Sterile Compounding

IV Compounding Management

IVX Workflow is powered by Omnicell IVX Manager, a software suite designed to manage all aspects of IV compounding workflow operation across a hospital or health system. IVX Manager supports comprehensive formulary and orders management, enabling:

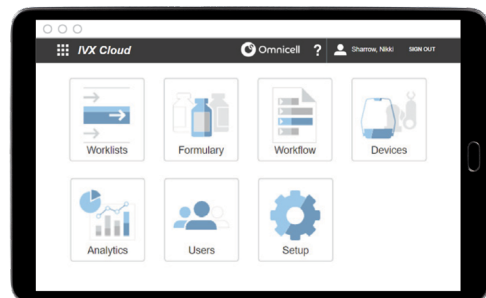

- Flexible workflow design to create risk-based workflows
- Remote pharmacist checking
- Robust reporting and analytics to drive optimisation and efficiency
- Integration with pharmacy and hospital information systems
- Enables compliance through automated documentation, allowing for easily retrievable digital records

IVX Workflow

The Omnicell Central Formulary (OCF)

The OCF is a cloud-based database providing essential compounding data for medications. Serving as the foundation for building site-specific formularies to be used with IVX Workflow, OCF optimises safety, compliance, and efficiency in pharmacy operations.
